Maintenance of Chemical Data in Your System

We Keep Your Data Up to Date

Article 31 (9) of REACH requires you, as the vendor of a chemical or chemical mixture, to keep the safety data sheet of your product up to date. The data and the label included in safety reports are also to be updated whenever new information on chemicals is made available. That's the only way to estimate risks reliably and to protect human health and the environment. Continuous maintenance of your data is therefore an absolute must. We would be pleased to take this burden off your back and update chemical data directly in your internal system.

UPDATING DATA–
Protecting the Environment and Health

Up-to-date chemical data ensures legal security and protects the environment and human health. The crux of the problem is that data becomes obsolete quickly and must be updated continuously. That means a lot of work for you as a businessperson. The solution? We can access your system remotely and update the data in it on an ongoing basis to reflect current chemical information.

Reliable regulatory compliance management is possible only with careful data maintenance. Missing or obsolete data can lead to exposure and accidents. Although no deadline is set for reworking the safety data sheet, REACH requires you, as a vendor, to update it as soon as:

- New information is available that can affect risk management
- New information on hazards is found
- A registration is granted or denied
- A restriction was issued

Swift updates mean more than legal security. They also minimize risk and help you monitor and drive your production, logistics, and distribution.

For over 20 years, our customers have relied on our expertise and services for data research and maintenance. Protect yourself from potential liability and fines and trust us to maintain your chemical data. We replace obsolete data and add new data to your IT system, such as SAP Environment, Health, and Safety Management. If desired, we can also use remote service to cover the entire process – from management of the vendor safety data sheet (KFT Control & Care) to the clearance of your documents.

Our Services Portfolio in Detail

- Monitoring of current laws on chemical compliance and taking action when necessary
- Fast and direct customer communication over Microsoft SharePoint directly in your system
- Replacement of obsolete data and entry of new chemical data over remote access to your IT system, such as SAP Environment, Health, and Safety Management
- Full service and coverage of the entire process with KFT Control & Care
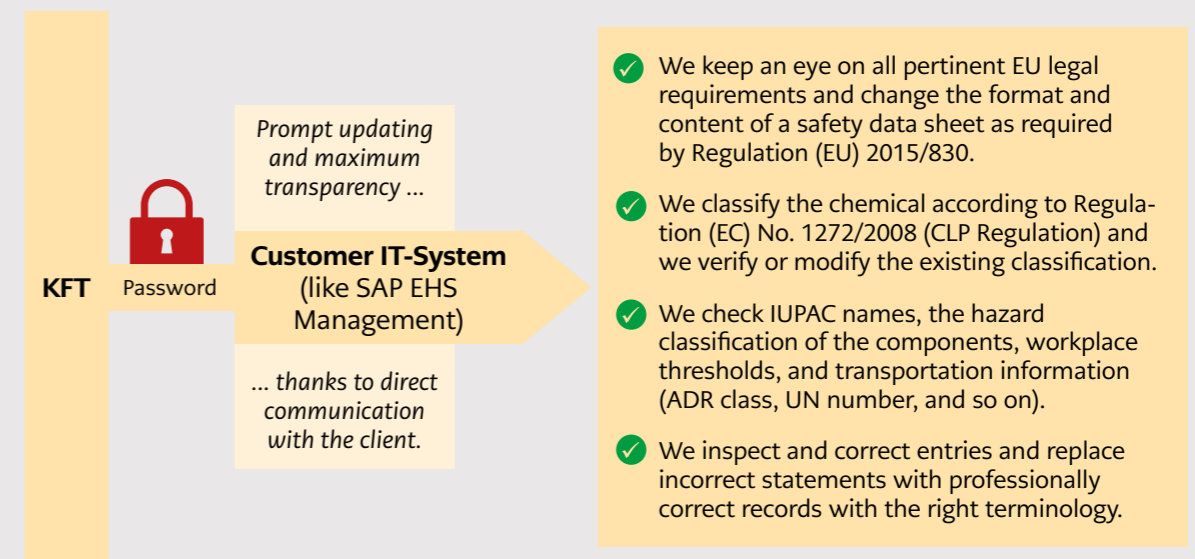

OUR SERVICE COMMITMENT

We Help You

- Check the updating requirements for your chemical data as defined in Article 31 (9) of REACH
- Update your chemical data

When are you required to update a safety data sheet? What services do we provide?

According to Article 31 (9) of REACH, updates are required as soon as:
- Information on new hazards or information that could affect risk management measures (such as a new classification according to the CLP) is available
- An authorization has been issued or denied
- A restriction has been issued

Prompt updating and maximum transparency ...

Customer IT-System (like SAP EHS Management)

... thanks to direct communication with the client.

- ✅ We keep an eye on all pertinent EU legal requirements and change the format and content of a safety data sheet as required by Regulation (EU) 2015/830.
- ✅ We classify the chemical according to Regulation (EC) No. 1272/2008 (CLP Regulation) and we verify or modify the existing classification.
- ✅ We check IUPAC names, the hazard classification of the components, workplace thresholds, and transportation information (ADR class, UN number, and so on).
- ✅ We inspect and correct entries and replace incorrect statements with professionally correct records with the right terminology.

Your Advantages

- Fast communication between us
- Maximum transparency, given that you can see and evaluate our work in your system directly
- Complete legal security
- Secure control of production, logistics, and marketing
- Better risk assessment and greater sustainability in terms of protecting the environment and human health
- Avoidance of liability and fines
